SUMMARY

Software Developer with a year of professional backend development experience and 3+ years of engineering background, including manufacturing automation systems and cloud-native backend development. Experienced in building microservices within Agile/Scrum development cycles, using Spring Boot, PostgreSQL, and Kubernetes-based infrastructure. Skilled in distributed system patterns, authentication integration, database performance optimization, and secure service deployment.

EXPERIENCE

Software Developer	Idemia Malaysia Sdn. Bhd.	09/2025 - Current
- Implemented backend microservices using Spring Boot and PostgreSQL within a microservices architecture. - Designed and implemented a state-machine based license control mechanism to minimize calls to corporate licensing APIs and resolve concurrency issues during high request loads. - Integrated enterprise authentication using Red Hat Single Sign-On for centralized user identity management. - Implemented TLS configuration for Spring Boot services, including self-signed certificate generation and certificate import for secure service communication. - Configured zero-trust network policies in Kubernetes to restrict service communication and improve cluster security. - Implemented reverse proxy routing using Gateway API with Traefik for backend services. - Developed flexible search APIs supporting multiple optional filters, sorting, and optimized performance by resolving N+1 query issues and introducing GIN indexing for substring searches in PostgreSQL. Implemented real time form validation leveraging Angular Form Control. Implemented interactive search result table via Angular Material. - Implemented Outbox Pattern with retry mechanisms to improve system reliability during message queue failures.		
Software Engineering Certification & Applied Projects	Online Bootcamp	01/2023 - 08/2025
Mini Threads Full Stack A simple clone of Meta's Threads, offering functionality such as post creation, commenting, user following, and profile editing. The front-end provides a smooth user experience built with Next.js and React, while the back-end handles authentication with Github and JWT. The RESTful API is tested using Jest, and image uploads are managed via Supabase. Data modeling is handled using Prisma ORM for efficient database management. Created with next.js, react, tailwindcss, shadcn/ui, node.js, passport.js, express, postgresSQL, prisma, supabase. Discord Bot ~ Serverless Back End A fully functional Discord bot, which integrates with the Discord API third-party APIs and netlify function to deliver interactive features. Features : slash command, external API integration, image rendering, scheduled reminders via cron-based GET request. Maple Library Front End A fan-made wiki for old school <i>MapleStory</i> featuring smooth client-side routing built with React, React Router, and Bootstrap. It incorporates fuzzy search and dynamic sorting based on user selection. Images are sourced from multiple locations, including local files, maplestory.io, and other websites. The data is fully static, exported as JSON and served to the client.		
Manufacturing Engineer	Western Digital Malaysia (HGST Sarawak)	04/2019 - 12/2022
- Conducted data-driven analysis, developed internal scripts to identify root causes of production system issues. - Reduced troubleshooting downtime by developing automation script for location verification. - Increased machine production rate by 25% through motion study and software optimization (control flow change and efficient data transfer) - Produced technical documentation and operational procedures for manufacturing systems.		

EDUCATION

The Odin Project Curriculum - Full Stack JavaScript	2023-2024
FreeCodeCamp Curriculum	2023
Bachelor of Engineering (Mechanical) (Honours) - Swinburne University of Technology	2015-2019

SKILLS

Programming Languages: Java, TypeScript, JavaScript, Python, Ruby, sql

Tools and Frameworks:

- Git, Spring Boot, Angular, Node.js, React, React Router, Next.js, Jest, Rails
- AngularMaterial, Bootstrap, Sass, tailwindcss, shadcn/ui, daisyUI
- mongoDB, PostgreSQL, Prisma, Spring Data JPA
- Jenkins, Docker, Kubernetes

Languages: English (proficient), Mandarin (native), Malay (proficient)

CERTIFICATIONS

Frontend Developer (React) - HackerRank
JavaScript (Intermediate) - HackerRank
Responsive Web Design - FreeCodeCamp
Relational Database - FreeCodeCamp
Information Security - FreeCodeCamp

Angular (Intermediate) - HackerRank
Problem Solving (Intermediate) - HackerRank
Front End Development Libraries - FreeCodeCamp
Back End Development and APIs - FreeCodeCamp
Machine Learning with Python - FreeCodeCamp
